MNG E-invoicing Solution (InvoiceNow)

What is Electronic Invoice Exchange?

In simple terms, it means exchanging invoices or credit notes between computer systems over a specific network. Unlike sending PDF or other formats of invoice via email, invoice sent to your customer or received from your vendor goes through a secured computer network with minimum human resource intervention. The invoice arrives in a structured format that is immediately ready to be processed for payment, with no need for any details to be keyed in all over again.

What is PEPPOL BIS 3.0?

PEPPOL is a standard established for trading partners to exchange invoice or credit memo (e-Invoice) over a common computer network, hereby known as PEPPOL network. Info-communications Media Development Authority (IMDA) has adopted PEPPOL BIS 3.0 as standard PEPPOL e-Invoice for Singapore. The diagram below is an illustration by IMDA depicting a PEPPOL e-Invoice process.

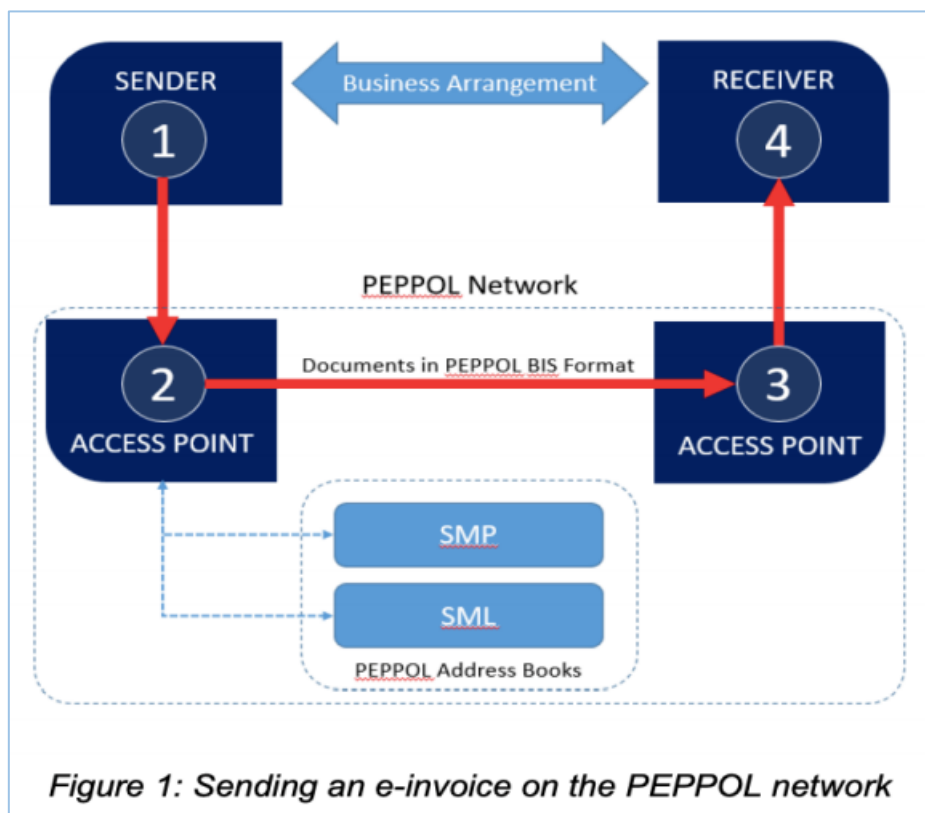

Figure 1: Sending an e-invoice on the PEPPOL network

Why do you need it?

- Issue and receive e-Invoice with lesser manual work and achieve higher data accuracy.
- Receive payment sooner with quicker invoice processing.
